项目搭建环境配置说明文档

1. 简介须知

需要安装的开发工具都在【知筑网】群文件夹里面。

5 楼临时服务器:

172.16.1.230 svn

172.16.1.230 maven-repo

备注:下面要改 Host 文件

虚拟机服务器(刘孟松那边现在有问题)

▶ maven/svn 内网服务器地址:

172.16.100.16 svn

172.16.100.16 maven-repo

> maven/svn 外网服务器地址:

60.190.252.98 svn

60.190.252.98 maven-repo

2. 项目开发过程图解

3. Host 文件配置

内网 ip:

172.16.1.230 svn

172.16.1.230 maven-repo

外网 ip:

60.190.252.98 svn

60.190.252.98 maven-repo

```
# localhost name resolution is handled within DNS itself.
# 127.0.0.1 localhost
# ::1 localhost
172.16.1.230 svn
172.16.1.230 maven-repo
```

将 svn,maven 服务器 ip 配置为域名,拉取代码的时候用域名去指定路径。内外网切换只需要修改 host 文件中 ip 即可。

Host 文件地址:

C:\Windows\System32\drivers\etc

PS: 关于修改 Host 文件权限不够的解决方案,复制出来更改,覆盖。

4. Jdk 安装

下载 jdk:

32 位: jdk-8u60-windows-i586.exe 64 位: jdk-8u60-windows-x64.exe

安装过程: http://jingyan.baidu.com/article/ab69b270c01a4d2ca7189f8c.html

环境变量配置:

path: D:\Java\jdk1.8.0_05\bin $\label{lambda} $$JAVA_HOME: D:\Java\jdk1.8.0_05\) $$$

PPS: path 和 JAVA_HOME 的路径是你自己的安装路径。

JAVA_HOME 放在最开始。

5. 安装 svn 客户端

svn 客户端大家最好版本安装一样的,不然到时候开发会出现版本不一致的情况。

32 位: TortoiseSVN-1.8.8.25755-win32-svn-1.8.10.msi

TortoiseSVN-1.8.8.25755-x64-svn-1.8.10.msi

64 位:

安装过程说明:选择安装路径,下一步下一步,完成。

验证安装是否成功:

6. 本地 maven 开发环境

Maven 安装文件: apache-maven-3.0.5.rar

从群里下载 settings. xml

解压即可: (解压路径就是之后的环境变量路径)

配置环境变量:

 $M2_HOME$

C:\develop\tool\apache-maven-3.0.5

Path:

C:\develop\tools\apache-maven-3.0.5\bin

覆盖默认 settings.xml 文件:

将群文件夹中 settings. xml 覆盖到:

7. Eclipse 开发工具

eclipse-jee-mars-R-win32.zip

64 位 eclipse-jee-luna-SR2-win32-x86_64.zip

解压即可。

打开 eclipse 开发环境:

8. 搭建项目环境

Eclipse 安装 svn 插件

svn 插件:

site-1.6.18.zip

从群里下载, 无需解压

按照提示,一步一步安装完成。

选择 yes

Eclipse 配置 maven 插件

本地拉取 svn 代码

eclipse 导入 maven 项目

parent 项目:

commons-util:

airshuttle-services:

airshuttle-manager-web:

配置应用数据库地址

eclipse 启动服务测试

请确认 eclipse 是否安装了 jetty 插件:

Eclipse 配置 jetty

如果没有安装,请安装如下步骤安装: 请从群空间下载:runjettyrun_1.3.3.201301020723.jar 放到 eclipse plugins 文件夹:

重启 eclipse, 配置 jetty 项目上下文:

Ctrl+Alt+Shift+Down

Ctrl+Alt+Shift+Up

1 Run on Server

m2 2 Maven build

m2 3 Maven build...

m2 4 Mayen clean m2 5 Maven generate-sources m2 6 Maven install

m2 7 Maven test

Run Configurations...

8 Run Jettv

eclipse 开发项目提交代码

选择你要提交的代码进行提交。

9. Eclipse Code Templates 设置

主要介绍如何设置 Code Templates, 具体步骤如下:

打开 Window->Preferences->Java->Code Style->Code Templates

导入 codetemplates.xml

```
3⊕ import net.paoding.rose.web.annotation.Param; ...
10
119 /***
12 *
13 * ClassName: ForumController <br/>
14 * Function: TODO ADD FUNCTION. <br/>
15 * Reason: TODO ADD REASON(可选). <br/>
16 * date: 2015年9月7日上午11:14:58 <br/>
17
   * @author root
18
   * @version
19
   * @since JDK 1.6
20
21 */
22 @Path("")
23 public class ForumController {
24
       /***
25⊜
```

10. 修改注释中的 author 名称

在 eclipse/myeclipse 中,当我们去添加注释的作者选项时,@author 后边一般都会默认填充的你登录计算机的用户名。如何去修改呢:

方法一: 修改计算机登录的用户名(99.9999%的人应该都不愿意去这样做,特别是一些公司的域帐户登录的电脑根本就改不了)。

方法二:将 @author 属性写死。

通过菜单 Window->Preference 打开参数设置面板,然后选择: Java -> Code Style -> Code Templates ,在右侧选择 Comments,将其中的 Types 项,然后选右边的"Edit",进入编辑模式,将 @author \${user} 中的\${user} 改成你自己的名字即可。

----我也曾经这改过,咸麻烦。

方法三: 修改 ini 配置文件。

在 eclipse/myeclipse 的目录下找到 eclipse.ini/myeclipse.ini 文件,在-vmargs 后边添加上启动参数: -Duser.name=你想要显示的名字。

重启 eclipse/myeclipse 搞定。

建议采用第三种:

11. Eclipse 安装 mybatis 插件生成数据库表对象

从群文件夹中下载:

分别拷贝文件 mybatis Generator plugins --> eclipse plugins 文件夹 mybatis Generator features--> eclipse features 文件夹

重启 eclipse,导入生成 mybatis mode 文件项目:

svn 拉取 mybatis 项目: https://svn/svn/tools/convertMybatis

导入到 eclipse 里面:

然后点击右键生成代码:

生成代码:

将需要的 model 拷贝到项目中,并且 DAO 需要用的 sql 也可以从 xml 中进行复制。

12. 格式化模板导入步骤

点击 Window->Preference->Java -> Code Style -> Formatter

点击右侧 Import 选择*.xml 模板文件导入即可如果需要对模板进行修改,可点击 Edit 编辑即可

https://github.com/jokeyrhyme/eclipse-formatter-profiles/edit/master/google-style-guide-javascript-eclipse.xml

13. Eclipse 配置注释,代码格式化换行字节数

Window--Preferences-- Java--Code Style --Formatter

设置 java 代码换行字节数: 120

注释换行字节数:

14. Eclipse Maven pom.xml 提示 Missing artifact jdk.tools:jdk.tools:jar:1.6

请添加如下配置:

```
Mmseg4jTest-web/pom.xml ☒ 🗓 MMSegAnalyzerTest.java
                   </dependency>
                       <groupId>org.springframework</groupId>
                       <artifactId>spring-mock</artifactId>
<version>2.0.8</version>
                       <scope>test</scope>
                  </dependency>
    959
96
97
98
99
                  <dependency>
                       <groupId>com.google.code.gson</groupId>
                       <artifactId>gson</artifactId>
                       <version>1.7.1
                  <dependency>
    101
102
                  <groupId>commons-codec</groupId>
<artifactId>commons-codec</artifactId>
    103
104
105
                       <version>1.6</version>
                  </dependency>
    106
107
108
                   <groupId>commons-httpclient</groupId>
<artifactId>commons-httpclient</artifactId>
<version>3.1</version>
    109
110⊖
                  </dependency>
                  <qroupId>jdk.tools</qroupId>
<artifactId>jdk.tools</artifactId>
<version>1.6</version>
<scope>aystem</scope>
    114
115
116
                       <systemPath>${JAVA_HOME}/lib/tools.jar</systemPath>
                  </dependency>
              </dependencies>
```

15. Eclipse properties 文件编辑器安装使用

为了方便我们在 properties 文件编辑中文,请安装 eclipse properties 插件:

请从群文件夹下载: jp.gr.java_conf.ussiy.app.propedit_5.3.3.zip

请选择 properties 文件默认以 proEditor 编辑:

参考资料: http://www.cnblogs.com/memory4young/p/eclipse-plugin-properties-editor.html
